## SUMMARY OF ANNUAL CHANGES

### 2019–2020

The following key changes have been made to the Income Tax Return Service build pack to accommodate annual changes for 2020:

- 'Shareholder AIM tax paid' will be returned from a 'Prepop' request when applicable.
- Non-resident foreign sourced income is no longer applicable for tax year 2020 and onward. An error message will be returned if it is inadvertently submitted via gateway services. It has been **REMOVED** from form IR215.
- The following fields have been **ADDED** to a number of IR forms for 2020 returns:

Field	IR forms
Shareholder AIM tax paid	IR3, IR4S
Residential income indicator	IR3, IR3NR, IR4, IR6, IR7, IR8, IR9
Total residential income	IR3, IR3NR, IR4, IR6, IR7, IR7L/IR7P, IR8, IR9
Residential rental deductions	IR3, IR3NR, IR4, IR6, IR7, IR7L/IR7P, IR8, IR9
Excess residential rental deductions brought forward	IR3, IR3NR, IR4, IR6, IR8, IR9
Residential rental deductions claimed this year	IR3, IR3NR, IR4, IR6, IR8, IR9
Net residential income	IR3, IR3NR, IR4, IR6, IR8, IR9
Excess residential rental deductions carried forward	IR3, IR3NR, IR4, IR6, IR8, IR9
Current year R&D non-refundable tax incentive credits to use or carry forward	IR3, IR3NR, IR4, IR6, IR8, IR9, IR44
R&D tax incentive credits to be refunded	IR4
Profit/loss from sale of property	IR8, IR9, IR44

- The following schemas have also changed for 2020:
  - ReturnIR3.v1.xsd
  - ReturnIR3NR.v1.xsd
  - ReturnIR4.v1.xsd
  - ReturnIR6.v1.xsd
  - ReturnIR7.v1.xsd
  - ReturnIR8.v1.xsd
  - ReturnIR9.v1.xsd
  - ReturnIR44.v1.xsd
  - IncomeReturnCommon.v1.xsd

## 1 Overview

### 1.1 This solution

Inland Revenue has a suite of digital services available for consumption by our service providers that supports efficient, electronic business interactions with Inland Revenue. The Income Tax Return Service described in this build pack document forms part of a suite of Gateway Services.

This build pack document is intended to provide the technical information required to support the end-to-end onboarding of the Income Tax Return Service. It describes the architecture of the technical solution, schemas, end points, sample payloads to use in non-production environments, and also its interaction with other build packs that cover different aspects of Gateway Services.

---

Before you continue, please be sure to consult  
<http://www.ird.govt.nz/software-providers/>  
for the products that use this Service, business-level context and use cases,  
links to relevant policy, and information on how to integrate with  
Inland Revenue's products and services.

---

### 1.2 Intended audience

The solution outlined in this document is intended to be used by technical teams and development staff. It describes the technical interactions, including responses, provided by the Income Tax Return Service.

The reader is assumed to have a suitable level of technical knowledge in order to understand the information provided. A range of technical terms and abbreviations are used throughout this document, and while most of these will be understood by the intended readers, a [glossary](#) is provided at the end of this document.

### 1.3 Related services

The following application programming interfaces (APIs) complement this Gateway Service. Further details can be found at <https://www.ird.govt.nz/software-providers/>

#### 1.3.1 Identity and Access Services (required)

The Identity and Access Services (IAS) are used to authenticate access. Authentication tokens will need to be retrieved via IAS prior to making calls to the Return Service. This Income Tax Return Service build pack was written using information from version 1.5 of the IAS build pack.

#### 1.3.2 Intermediation Service (recommended)

The Intermediation Service build pack supports software providers with the process of linking tax intermediaries (such as tax agents) to their clients so intermediaries can act on their behalf through the Return service.

## 1.4 Prerequisites

Party	Requirement	Description
<b>Service provider</b>	Acquire a X.509 certificate from a certificate authority for the Test and Production environments	This is required when using mutual TLS with cloud-based service providers.  Note that the same certificate cannot be used for the Test and Production environments.

### 1.4.1 Mutual Transport Layer Security and certificates

Mutual Transport Layer Security (TLS) is implemented for the Income Tax Return Service. This requires the use of a publicly-issued X509 certificate from one of the trusted certificate authorities. Inland Revenue does not issue certificates to external vendors for web service security implementations.

Inland Revenue has the following minimum requirements for accepting public X509 keys:

1. Minimum Key Length: 2048
2. Signature Algorithm: SHA256[RSA]
3. Self-signed certificates are not accepted
4. Certificates issued by a private/internal certificate authority are not accepted.

In general, shorter-lived certificates offer a better security posture since the impact of key compromise is less severe but there is no minimum requirement for certificate expiry periods.

Below is a list for examples of certificate authority providers with no recommendations or rankings incorporated. It is recommended that a business researches which certificate authority meets their requirements.

- [Comodo](#)
- [GeoTrust](#)
- [DigiCert](#)
- [GlobalSign](#)
- [Symantec](#)
- [Thawte](#)
- [IdenTrust](#)
- [Entrust](#)
- [Network Solutions](#)
- [RapidSSL](#)
- [Entrust Datacard](#)
- [GoDaddy](#).

## 2 Solution design

### 2.1 Architecture

Inland Revenue is offering a suite of web services in order to facilitate interactions via software packages. The Gateway Services suite will be used by approved software providers to facilitate everything from registration activities, filing returns, making payments and other service offerings in order to allow customers to interact with Inland Revenue.

The diagram below illustrates the flow of data from the tax agent to Inland Revenue.

The WSDLs for the Gateway Services define an 'any' XML request and response structure, which then relies on a group of XSDs to define the data structure of those requests and responses. Each request and response type will define a lower, 'wrapper' element.

Any malformed XML will instantly be rejected by the Gateway Services prior to any schema validation.

### 2.2 Service scope

The Income Tax Return Service supports the following operations:

- **File:** This service is used to submit an income tax return to Inland Revenue for a customer.
- **Prepop:** This service is used by software to provide figures to assist in the calculation and display of return information prior to submission.
- **RetrieveStatus:** This service is used by software to return a status for a particular income tax return.
- **RetrieveReturn:** This service retrieves a previously submitted income tax return and the values associated to that return.
- **RetrieveFilingObligation:** This service retrieves the expectations for a customer to file an income tax return.

## 2.3 Messaging

All SOAP messages require a SOAP header containing an **Action:** parameter and a SOAP body containing a structured XML payload. Please refer to the WSDL for the correct soapAction.

The Gateway Services allow the consumption of any structured XML payload but will be validated against the Inland Revenue-published XSDs.

This is a late binding validation, performed after authentication has been reviewed. The message structure of these services is a simple request/response. The XML request will be checked for well-formed XML before the schema validation. Responses to these requests will be in XML format as well and will be defined in the same schemas that define the requests.

Any XML submissions in the SOAP body that do not meet the provided schemas will not be accepted by the Gateway Services. Incorrect namespaces will also fail validation against the published schemas.

### Example SOAP request structure

```
<soap:Envelope xmlns:soap="http://www.w3.org/2003/05/soap-envelope"
  xmlns:a="http://www.w3.org/2005/08/addressing">
  <soap:Header>
    <a:Action>https://services.ird.govt.nz/GWS>Returns/Return/Operation</a:Action>
  </soap:Header>
  <soap:Body>
    <rc:fileHeader>...</rc:fileHeader>
    <rc:fileBody>
      <rc:standardFields>
        <rc:formFields xsi:type="r:FormFieldsType">
          <...tax specific fields...>
        </rc:formFields>
      </rc:fileBody>
    </r:fileRequest>
  </soap:Body>
</soap:Envelope>
```

## Example SOAP response structure

  </s:Header>
  <s:Body>
    <FileResponse xmlns="https://services.ird.govt.nz/GWS>Returns/">
      <FileResult xmlns:b="https://services.ird.govt.nz/GWS>Returns/:types/FileResponse"
xmlns:i="http://www.w3.org/2001/XMLSchema-instance">
        <b:FileResponseWrapper>
          <fileResponse xmlns="urn:www.ird.govt.nz/GWS:types/Common.v2">
            <statusMessage>
              <statusCode>0</statusCode>
              <errorMessage/>
            </statusMessage>
          </fileResponse>
        </b:FileResponseWrapper>
      </FileResult>
    </FileResponse>
  </s:Body>
</s:Envelope>
```

## 2.4 Security

Gateway Services requests are access-controlled using an OAuth token that identifies the user making the request. Users will authenticate using their Inland Revenue myIR credentials. For instructions on how to acquire an OAuth token, review the Identity and Access Services build pack.

Authorisation for using the Gateway Services is defined in the permissions set in myIR. Permissions will reflect those granted in myIR. For example, if a user does not have permission to file a return online, they will not be able to file a return via Gateway Services either. This applies to users who are granted access as staff inside an organisation or as staff in a tax agency.

The Gateway Services use an HTTPS transport layer, with HTTP1.1 transport protocol supported.

The Gateway Services also use the SOAP version 1.2 protocol.

The SOAP service contract is published using WSDL version 1.1.

Regarding transport layer security (TLS), note that while TLS1.3 is now an industry standard, it is not yet widely adopted, as doing so requires upgrades to perimeter security devices and software. Inland Revenue will upgrade to TLS1.3 once it is adopted widely enough, and where practical, external software partners should also anticipate upgrading to this version. TLS1.0 and TLS1.1 are not supported by myIR or Gateway Services.

Inland Revenue requires the following ciphers and key strengths to be used:

<b>Encryption:</b>	Advanced Encryption Standard (AES)	FIPS 197	256-bit key
<b>Hashing:</b>	Secure Hash Algorithm (SHA-2)	FIPS 180-3	SHA-256

There will be two end points, which are summarised in the bullet points and table below:

1. There is an end point to which service providers' centralised **cloud** locations can connect. This will involve mutual TLS certificates that need to be exchanged during the onboarding phase. On the cloud end point, Inland Revenue has controls to shield service providers from issues caused by heavy usage by other providers.
2. For service providers connecting from **desktops**, there is a separate end point that does not use mutual TLS. For this service, certificates do not need to be exchanged during onboarding. On the desktop end point, Inland Revenue has less ability to shield consumers of the service from heavy usage by others.

	End point for cloud-based connections	End point for desktop connections
<b>Purpose</b>	<ul style="list-style-type: none"> <li>This is the default end point to connect software providers to the Gateway Services</li> </ul>	<ul style="list-style-type: none"> <li>Additional end point provided to facilitate connecting from desktops which may have high volumes of sources addresses, transient DHCP addresses, not realistically associated with client-side TLS certificates, not individually onboarded to setup certificate trust</li> </ul>

**Delegated permissions:** The services will allow one to retrieve all of the data for a customer that the calling user (as represented by the OAuth token) has access to. There may be additional accounts this identity does not have access to, those will not be mentioned. If an account or data in it is targeted by the request parameters but the user does not have permission an error will be returned. This access will depend on delegation permissions set up in myIR.

For updates to versions of the SOAP architecture including the communication standards, security and service end points please refer to <https://www.ird.govt.nz/software-providers/docs/web-service/>

### 3 Income Tax operations

#### IMPORTANT

The end points, schemas and WSDLs listed here are subject to change.

For the authoritative definitions, please visit

<https://www.ird.govt.nz/software-providers/>

The structures of all Gateway Service operations are intended to produce the most efficient requests and responses. Any common structures and fields will be used across many schemas and tax types through an intentional inheritance method. The section below describes the structure of each operation and the scenarios in which certain fields will be used in XML requests and responses.

This section contains schema aliases:

- cmn: Common.v2.xsd
- rc: ReturnCommon.v2.xsd
- ic: IncomeReturnCommon.v1.xsd
- r: ReturnSpecific.v1.xsd (for example, ReturnIR3.v1.xsd)

**NOTE:** Some requests and responses live in ReturnCommon.v2.xsd but can still be generated from an inheriting return-specific XSD. This could mean the schemaLocation could be different, depending on where the payload was generated from. Any method of generating these payloads is accepted. This applies to the fileResponse XML directly below.

The response structure for all File requests will use the two default service response fields: **statusCode** and **errorMessage**. The identifier for this XML is fileResponse in the ReturnCommon namespace.

The response structure for all File requests will have the **gatewayId** field populated. The gatewayId is a unique identifier passed back in the responseBody, assuming the response code for the request is zero (refer to [Chapter 6 Responses](#)). The gatewayId should be recorded and can be used by technical teams for troubleshooting. The gatewayId will not appear in search results when searching myIR. The gatewayId is also not available to Inland Revenue front-line staff (such as in the telephone contact centre) to search on.

For example:

```
<fileResponse xmlns="urn:www.ird.govt.nz/GWS:types/ReturnCommon.v2">
  <StatusMessage xmlns="urn:www.ird.govt.nz/GWS:types/Common.v2">
    <statusCode>0</statusCode>
    <errorMessage/>
  </StatusMessage>
  <responseBody>
    <gatewayId>0000 002J ZJ5N 6</gatewayId>
    <submissionKey>2027618304</submissionKey>
  </responseBody>
</fileResponse>
```

All operations for the Return Service will contain two standard header fields:

- **softwareProviderData**
- **identifier.**

The **identifier** field is common across all Gateway Services but refers to different parties in different services. In all cases it is the party with delegated permissions to whom an Oauth token is provided. If the value cannot be resolved to a known context, or if it can but the provided Oauth token does not have the necessary delegated permissions, then the error code 4 "unauthorised delegation" is returned. Please refer to individual operations for the nature of the identifier expected in this parameter in any given context.

For example:

```
<cmn:softwareProviderData>
  <cmn:softwareProvider>SoftwareProvider</cmn:softwareProvider>
  <cmn:softwarePlatform>SoftwarePlatform</cmn:softwarePlatform>
  <cmn:softwareRelease>v1</cmn:softwareRelease>
</cmn:softwareProviderData>
<cmn:identifier IdentifierValueType="ACCIRD">012345678</cmn:identifier>
<cmn:accountType>INC</cmn:accountType>
```

Field	Requirement	Description
<b>softwareProvider</b>	Required	The company or financial institution that developed the software
<b>softwarePlatform</b>	Required	The field value will be provided by Inland Revenue during the onboarding process
<b>softwareRelease</b>	Required	The version of the software package
<b>IdentifierValueType</b>	Required	<p>The ID type being submitted. This can be ACCIRD, IRD or ACC. The value submitted for this field should contain only digits, with no dashes (with the exception of the ACC field, which may contain letters to identify the account type). IRD Numbers that are eight digits must be padded with a leading zero.</p> <p>Format Examples:</p> <ul style="list-style-type: none"> <li>• IRD: 123456789</li> <li>• ACCIRD: 123456789</li> <li>• ACC: 123456789INC001</li> </ul>
<b>identifier</b>	Required	The value submitted for this field should contain only digits, with no dashes. IRD Numbers that are eight digits must be padded with a leading zero.
<b>accountType</b>	Required	The account type being submitted (INC)

Proper use:

- The only softwareProviderData fields users will be able to input are the ones that were provided to Inland Revenue at the time of on-boarding.
- The identifier is that of the tax payer on whose behalf the operations are being performed.

### 3.1 File

The File operation will be used to submit all returns, regardless of the tax type. Note that the request and response structure is the same for all tax types.

Base structure:

```
<r:fileRequest namespaces...>
  <rc:fileHeader>...</rc:fileHeader>
  <rc:fileBody>
    <rc:standardFields>...</rc:standardFields>
    <rc:formFields xsi:type="r:FormFieldsType">
      <...tax specific fields...>
      <r:attachmentForms>
    </rc:formFields>
  </rc:fileBody>
</r:fileRequest>
```

Field	Requirement	Description
<b>fileHeader</b>	Required	The standard header for File requests across all tax types
<b>fileBody</b>	Required	The standard body structure for File requests across all tax types
<b>standardFields</b>	Required	A group of fields standard across all tax types
<b>formFields</b>	Required	A wrapper that will contain tax form-specific fields
<b>attachmentForms</b>	Optional	A wrapper that contains attachment forms and their specific fields. This can only be used when submitting a primary form.

### 3.1.1 File header

<FileHeader> structure:

```
<r:fileRequest namespaces...>
  <rc:fileHeader>
    <cmn:softwareProviderData>
      <cmn:softwareProvider>SoftwareProvider</cmn:softwareProvider>
      <cmn:softwarePlatform>SoftwarePlatform</cmn:softwarePlatform>
      <cmn:softwareRelease>v1</cmn:softwareRelease>
    </cmn:softwareProviderData>
    <cmn:identifier IdentifierValueType="IRD">012345678</cmn:identifier>
    <cmn:accountType>INC</cmn:accountType>
    <rc:periodEndDate>2019-03-31</rc:periodEndDate>
    <rc:majorFormType>INC</rc:majorFormType>
    <rc:minorFormType>3</rc:minorFormType>
  </rc:fileHeader>
  <rc:fileBody>
    <rc:standardFields>...</rc:standardFields>
    <rc:formFields xsi:type="r:FormFieldsType">
      <...tax specific fields...>
      <r:attachmentForms>
    </rc:formFields>
  </rc:fileBody>
</r:fileRequest>
```

Field	Requirement	Description
<b>periodEndDate</b>	Required	The period in which a return exists or the period for which it is being submitted
<b>majorFormType</b>	Required	The greater type of return being submitted (INC)
<b>minorFormType</b>	Required	The specific income tax return being filed. List of valid minor form types in section <a href="#">3.1.4</a> .

Proper uses:

- The major and minor form types will be used together to determine the submission form. The "minorFormType" will be used when document versioning happens to be able to route incoming payloads to the correct form types.

Example scenario:

- Attempting to submit an IR3 Return for the 2019 period.
 

```
<cmn:accountType>INC</cmn:accountType>
<rc:periodEndDate>2019-03-31</rc:periodEndDate>
<rc:majorFormType>INC</rc:majorFormType>
<rc:minorFormType>3</rc:minorFormType>
```

### 3.1.2 File body

<FileBody> structure:

```
<r:fileRequest namespaces...>
  <rc:fileHeader>...</rc:fileHeader>
  <rc:fileBody>
    <rc:standardFields>...</rc:standardFields>
    <rc:formFields xsi:type="r:FormFieldsType">
      <...tax specific fields...>
      <r:attachmentForms>
    </rc:formFields>
  </rc:fileBody>
</r:fileRequest>
```

FileBody is simply the wrapper of standardFields and formFields. The standard fields will be constant in every fileBody.

### 3.1.3 Standard fields

<StandardFields> structure:

```
<r:fileRequest namespaces...>
  <rc:fileHeader>...</rc:fileHeader>
  <rc:fileBody>
    <rc:standardFields>
      <rc:isNilReturn>>false</rc:isNilReturn>
      <rc:isFinalReturn>>false</rc:isFinalReturn>
      <rc:amendmentRequest>
        <rc:isAmended>>false</rc:isAmended>
        <rc:amendReason></rc:amendReason>
        <rc:amendDetails></rc:amendReason>
      </rc:amendmentRequest>
      <rc:creditTransferRequest>
        <rc:transferIRD></rc:transferIRD>
        <rc:transferAccountType></rc:transferAccountType>
        <rc:transferFilingPeriod></rc:transferFilingPeriod>
        <rc:associatedCustomer></rc:associatedCustomer>
        <rc:transferAmount></rc:transferAmount>
      </rc:creditTransferRequest>
    </rc:standardFields>
    <rc:formFields xsi:type="r:FormFieldsType">
      <...tax specific fields...>
      <r:attachmentForms>
    </rc:formFields>
  </rc:fileBody>
</r:fileRequest>
```

Field	Requirement	Description
<b>isNilReturn</b>	Optional	This notes that the return is nil. This field will be overridden if it does not match content of the submission.

Field	Requirement	Description
<b>isFinalReturn</b>	Optional	This field notes that the account is ready to be closed after this filing period
<b>isAmended</b>	Required	This allows for a return to be filed as an amendment. <b>NOTE:</b> If isAmended=true then amendReason and amendDetails are required. Otherwise empty values are required in the amendReason and amendDetails fields.
<b>amendReason</b>	Conditional	This is attached to the amendmentRequest as the reason for the amendment. This can be either KEY (incorrect amount), MATH (calculation error), OTHER, or TRNSPO (transposition error).
<b>amendDetails</b>	Conditional	This allows for further details on the amendmentRequest
<b>creditTransferRequest</b>	Optional	These fields can be added to transfer the refund to another START account. Any number of credit transfers from 0 to 10 can be submitted for every file operation. Credit transfers are valid for all primary form types except for 4J, 8J, and 7. List of valid account types to credit transfer to: INC (Individuals), AIL, AIP, CRS, DWT, FAM, FBT, GMD, GSD, GST, IPE, IPS, NRT, PIE, PRS, REB, RLT, RWT, SLS. Web logons with 'File' or 'File and pay' will be permitted to complete the creditTransferRequest. Note, this differs from myIR security functionality.

Proper uses:

- Most standard submissions will require isNilReturn to be *false*, isFinalReturn to be *false*, and isAmended to be *false*.

Example scenario:

- Attempting to amend an income tax return due to lack of information from client.

### 3.1.4 Form fields

Every minor form type represents a different return or form. These can be either a primary form or an attachment form. Primary forms can be submitted with multiple attachment forms in the same payload using the attachmentForms element. Primary forms can only be submitted as a primary form, and not inside the attachmentForms element. Attachment forms can be submitted alone under the formFields element, or as an attachment under the attachmentForms element.

For most forms, only one is allowed to be submitted per period. Some form types, however, can be submitted multiple times in the same period, in which case a submissionKey is required to be submitted on amendment.

**NOTE:** The years supported for each minorFormType are listed in the [appendix](#).

minorFormType	Form type	Forms allowed per period	Description
<b>3</b>	Primary	Single	Individual income tax return

<b>attachment</b>	Required	A wrapper that that contains the details for each attachment. Repeatable for every attachment.
<b>formType</b>	Required	minorFormType of the attachment that is being submitted
<b>formFields</b>	Required	formFields of the attachment that is being submitted. These are the same formFields that are outlined in the sections above for the attachment that is being submitted.

**NOTE:** AttachmentForms can be submitted with primary forms in the same request. Multiple attachment forms can be submitted in the same request if the attachment allows for it (as outlined in the form fields table in [section 3.1.4](#)).

### 3.1.6 Amendments

When amending a return with attachmentForms included, the primary form and all attachments must already exist. No new forms can be submitted using an amendment request. In order to add a new form to an existing return, a non-amendment file request must be submitted for the specific minorFormType. There is no way to delete the form once it has been submitted. SubmissionKeys can always be submitted on amendments but are only required for form types that allow multiple forms to be submitted per period.

## 3.2 Prepop

The Prepop operation will be used to acquire a specific subset of fields for a given return. This operation uses the <retrieveFormInfoRequest> structure for the request which will have a unique response across tax types. minorFormType and submissionKey are not used for this operation.

<retrieveFormInfoRequest> structure:

```

```

**NOTE:** A list of **additionalInfo** codes is available in the [appendix](#) of this build pack.

Status	Code	Description
<b>Default assessment</b>	EST	This status is displayed when the return is a default assessment
<b>Expected</b>	EXP	This status is displayed when a return is expected to be filed
<b>Interim-processing</b>	IPRCG	This status is displayed when forms have been received and are processing, but the customer has not yet fulfilled their filing obligation. For example, an imputation return is received without an income tax return.
<b>Interim return</b>	IPRCD	This status is displayed when forms have been received, but the customer has not yet fulfilled their filing obligation. For example, an imputation return is received without an income tax return.
<b>Late-processing</b>	LPRCG	This status is displayed when the return is received late and processing
<b>Late-processed</b>	LPRCD	This status is displayed when the return is processed late
<b>Optional</b>	NRQD	This status is displayed when the return is not required to be filed, but the customer may choose to file anyway
<b>Ontime-processing</b>	OPRCG	This status is displayed when the return is received on time and processing
<b>Ontime-processed</b>	OPRCD	This status is displayed when the return is processed on time
<b>Overdue</b>	OVERDU	This status is displayed when the return is overdue
<b>Submitted</b>	SUB	This status is displayed when the return is submitted but is not yet processed

**NOTE:** The status name is the external decode for each status. Please note that it is subject to wording changes. The code attribute, however, will remain constant for each status.

When a return is in the 'submitted' status, functionality surrounding it is limited as follows until the return progresses to another status:

- Amendments cannot be submitted for the return
- submissionKeys are only available for the primary form
- RetrieveReturn is only available for the primary form
- RetrieveReturn is not available if the submission affects a return that already exists, either because of an amendment or because an attachment is being added to the return.

When a return is in one of the 'processing' statuses, it can only be amended or retrieved according to the additionalInfo code. It cannot be amended or retrieved if the additionalInfo code is 'RTNERE'.

### 3.4 RetrieveReturn

The retrieveReturn operation allows for previously-filed returns on the period to be viewed. The fields for each form type are returned using the same formFields structure as in the file operation.

**<retrieveFormInfoRequest>** structure:

```
<rc:formInfoRequest xmlns:cmn="urn:www.ird.govt.nz/GWS:types/Common.v2"
  xmlns:rc="urn:www.ird.govt.nz/GWS:types/ReturnCommon.v2"

Field	Requirement	Description
<b>majorFormType</b>	Required	Required for every retrieveFormInfoRequest
<b>minorFormType</b>	Required	Used to determine the form type to retrieve
<b>submissionKey</b>	Optional	Can be used to specify a submission of the minor form type. This is required for form types that allow multiple forms to be submitted per period.

### 3.5 RetrieveFilingObligation

The retrieveFilingObligation operation is used to retrieve the date on which the next return is due, as well as any overdue returns for a specified account. This may also include past years' periods that are not supported via filing on Gateway Services. This operation has the same request and response structure for all tax types.

**<retrieveFilingObligationsRequest>** structure:

```

## 4 Donation Tax Credit operations

---

### IMPORTANT

The end points, schemas and WSDLs listed here are subject to change.  
For the authoritative definitions, please visit  
<https://www.ird.govt.nz/software-providers/>

---

The structures of all Gateway Service operations are intended to produce the most efficient requests and responses. Any common structures and fields will be used across many schemas and tax types through an intentional inheritance method. The section below describes the structure of each operation and the scenarios in which certain fields will be used in XML requests and responses.

This section contains schema aliases:

- cmn: Common.v2.xsd
- rc: ReturnCommon.v2.xsd
- r: ReturnReb.v1.xsd

**NOTE:** Some requests and responses live in ReturnCommon.v2.xsd but can still be generated from an inheriting return-specific XSD. This could mean the schemaLocation could be different, depending on where the payload was generated from. Any method of generating these payloads is accepted. This applies to the fileResponse XML directly below.

The response structure for all File requests will use the two default service response fields: **statusCode** and **errorMessage**. The identifier for this XML is fileResponse in the ReturnCommon namespace.

The response structure for all File requests will have the **gatewayId** field populated. The gatewayId is a unique identifier passed back in the responseBody, assuming the response code for the request is zero (refer to [Chapter 6 Responses](#)). The gatewayId should be recorded and can be used by technical teams for troubleshooting. The gatewayId will not appear in search results when searching myIR. The gatewayId is also not available to Inland Revenue front-line staff (such as in the telephone contact centre) to search on.

### IMPORTANT

The Donation Tax Credit service is only available for use by tax agents to file on behalf of their clients.

This is because tax agents have signed an agreement with Inland Revenue and are authorised to retain records on behalf of clients without having to submit these records directly to Inland Revenue, unless requested.

## 4.1 File

The File operation will be used to submit all returns, regardless of the tax type. Note that the request and response structure is the same for all tax types.

Base structure:

```
<r:fileRequest namespaces...>
  <rc:fileHeader>...</rc:fileHeader>
  <rc:fileBody>
    <rc:standardFields>...</rc:standardFields>
    <rc:formFields xsi:type="r:FormFieldsType">
      <...tax specific fields...>
    </rc:formFields>
  </rc:fileBody>
</r:fileRequest>
```

Field	Requirement	Description
<b>fileHeader</b>	Required	The standard header for File requests across all tax types
<b>fileBody</b>	Required	The standard body structure for File requests across all tax types
<b>standardFields</b>	Required	A group of fields standard across all tax types
<b>formFields</b>	Required	A wrapper that will contain tax form-specific fields

### 4.1.1 File header

<FileHeader> structure:

```
<r:fileRequest namespaces...>
  <rc:fileHeader>
    <cmn:softwareProviderData>
      <cmn:softwareProvider>SoftwareProvider</cmn:softwareProvider>
      <cmn:softwarePlatform>SoftwarePlatform</cmn:softwarePlatform>
      <cmn:softwareRelease>v1</cmn:softwareRelease>
    </cmn:softwareProviderData>
    <cmn:identifier IdentifierValueType="IRD">012345678</cmn:identifier>
    <cmn:accountType>REB</cmn:accountType>
    <rc:periodEndDate>2019-03-31</rc:periodEndDate>
    <rc:majorFormType>REB</rc:majorFormType>
  </rc:fileHeader>
  <rc:fileBody>
    <rc:standardFields>...</rc:standardFields>
    <rc:formFields xsi:type="r:FormFieldsType">
      <...tax specific fields...>
    </rc:formFields>
  </rc:fileBody>
</r:fileRequest>
```

Field	Requirement	Description
<b>periodEndDate</b>	Required	The period in which a return exists or the period for which it is being submitted
<b>majorFormType</b>	Required	The greater type of return being submitted (REB)

#### 4.1.2 File body

<FileBody> structure:

```

<r:fileRequest namespaces...>
  <rc:fileHeader>...</rc:fileHeader>
  <rc:fileBody>
    <rc:standardFields>...</rc:standardFields>
    <rc:formFields xsi:type="r:FormFieldsType">
      <...tax specific fields...>
    </rc:formFields>
  </rc:fileBody>
</r:fileRequest>

```

FileBody is simply the wrapper of standardFields and formFields. The standard fields will be constant in every fileBody.

#### 4.1.3 Standard fields

<StandardFields> structure:

```

<r:fileRequest namespaces...>
  <rc:fileHeader>...</rc:fileHeader>
  <rc:fileBody>
    <rc:standardFields>
      <rc:isNilReturn>false</rc:isNilReturn>
      <rc:amendmentRequest>
        <rc:isAmended>false</rc:isAmended>
      </rc:amendmentRequest>
      <rc:creditTransferRequest>
        <rc:transferIRD></rc:transferIRD>
        <rc:transferAccountType></rc:transferAccountType>
        <rc:transferFilingPeriod></rc:transferFilingPeriod>
        <rc:associatedCustomer></rc:associatedCustomer>
        <rc:transferAmount></rc:transferAmount>
      </rc:creditTransferRequest>
    </rc:standardFields>
    <rc:formFields xsi:type="r:FormFieldsType">
      <...tax specific fields...>
      <r:attachmentForms>
    </rc:formFields>
  </rc:fileBody>
</r:fileRequest>

```

Field	Requirement	Description
<b>isNilReturn</b>	Required	Donation Tax Credits do not support nil returns, so this should always be set to false
<b>isAmended</b>	Required	Amendments are not supported for Donation Tax Credits. In the case that receipts have been omitted a new filing submission will be needed.
<b>creditTransferRequest</b>	Optional	<p>These fields can be added to transfer the refund to another START account. Any number of credit transfers from 0 to 10 can be submitted for every file operation. Credit transfers are valid for all primary form types except for 4J, 8J and 7.</p> <p>List of valid account types to credit transfer to: INC (Individuals), AIL, AIP, CRS, DWT, FAM, FBT, GMD, GSD, GST, IPE, IPS, NRT, PIE, PRS, REB, RLT, RWT, SLS.</p> <p>Web logons with 'File' or 'File and pay' will be permitted to complete the creditTransferRequest. Note, this differs from myIR security functionality.</p>

#### 4.1.4 Form fields

```
<rc:formFields xsi:type="r:FormFieldsType">
  <r:schoolKindergartenDonations>200</r:schoolKindergartenDonations>
  <r:partnerSchoolKindergartenDonations>100</r:schoolKindergartenDonations>
  <r:religiousOrganisationDonations>300</r:religiousOrganisationDonations>
  <r:partnerReligiousOrganisationDonations>100</r:religiousOrganisationDonations>
  <r:doneeOrganisationDonations>400</r:doneeOrganisationDonations>
  <r:partnerDoneeOrganisationDonations>100</r:doneeOrganisationDonations>
  <r:partnerIRD>123123123</r:partnerIRD>
</rc:formFields>
```

Although all fields are optional, at least one donation amount must be submitted.

Field	Requirement	Description
<b>schoolKindergartenDonations</b>	Optional	School/kindergarten donations
<b>partnerSchoolKindergartenDonations</b>	Optional	Partner's contribution to the school/kindergarten donations
<b>religiousOrganisationDonations</b>	Optional	Religious organisation donations
<b>partnerReligiousOrganisationDonations</b>	Optional	Partner's contribution to the religious organisation donations

Field	Requirement	Description
<b>doneeOrganisationDonations</b>	Optional	Donee organisation donations
<b>partnerDoneeOrganisationDonations</b>	Optional	Partner's contribution to the donee organisation donations
<b>totalReceiptAmount</b>	Not used	Total receipt amount. This will be populated on retrieveReturn.
<b>taxCreditClaimAmount</b>	Not used	Tax credit claim amount. This will be populated on retrieveReturn.
<b>partnerIRD</b>	Optional	IRD number of the partner with whom receipts are shared

## 4.2 RetrieveStatus

The RetrieveStatus operation will allow the status of a given return to be queried. There is a maximum of one REB return on a period. Multiple file submissions get summarised into a single return. Since RetrieveStatus retrieves the status of the return as a whole, minorFormType and submissionKey are not used for this operation.

**<retrieveFormInfoRequest>** structure:

```
<rc:formInfoRequest xmlns:cmn="urn:www.ird.govt.nz/GWS:types/Common.v2"
  xmlns:rc="urn:www.ird.govt.nz/GWS:types/ReturnCommon.v2"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="urn:www.ird.govt.nz/GWS:types/ReturnIR3.v1">
  <cmn:softwareProviderData>
    <cmn:softwareProvider>SoftwareCompany</cmn:softwareProvider>
    <cmn:softwarePlatform>SoftwarePlatform</cmn:softwarePlatform>
    <cmn:softwareRelease>V1</cmn:softwareRelease>
  </cmn:softwareProviderData>
  <cmn:identifier IdentifierValueType="ACCIRD">123456789</cmn:identifier>
  <cmn:accountType>REB</cmn:accountType>
  <rc:periodEndDate>2019-03-31</rc:periodEndDate>
  <rc:majorFormType>REB</rc:majorFormType>
</rc:formInfoRequest>
```

Field	Requirement	Description
<b>majorFormType</b>	Required	Required for every retrieveFormInfoRequest
<b>minorFormType</b>	Not used	Not used for retrieveStatus operation
<b>submissionKey</b>	Not used	Not used for retrieveStatus operation

**<retrieveStatusResponse>** structure:

```
<retrieveStatusResponse xmlns="urn:www.ird.govt.nz/GWS:types/ReturnCommon.v2">
  <statusMessage xmlns="urn:www.ird.govt.nz/GWS:types/Common.v2">
    <statusCode>0</statusCode>
    <errorMessage/>
  </statusMessage>
  <responseBody>
    <returnStatus>
      <status code="PRCG">Processing</status>
    </returnStatus>
  </responseBody>
</retrieveStatusResponse>
```

Status	Code	Description
<b>Processed</b>	PRCD	This is displayed when the customer's receipts have been approved
<b>Processing</b>	PRCG	This status is displayed when the customer's receipts are being processed

**NOTE:** The Status name is the external decode for each status. Note that while it is subject to wording changes, the code attribute will remain constant for each status.

### 4.3 RetrieveReturn

The retrieveReturn operation allows the return on the period to be viewed. There is a maximum of one REB return on a period. Multiple file submissions are summarised into a single return. The partner's information will not be shown on retrieveReturn even if it was included in the file submissions. To view the partner's return information, a retrieveReturn must be done on the partner's account.

## 5 End points, schemas and WSDLs

---

---

### IMPORTANT

The end points, schemas and WSDLs listed here are subject to change.  
For the authoritative definitions, please visit  
<https://www.ird.govt.nz/software-providers/>

---

### 5.1 End points

Onboarding instructions are available at <https://www.ird.govt.nz/software-providers/>.

### 5.2 Schemas

All schemas for the Return Service import a Common.v2.xsd which has some data types specific to Inland Revenue. This Common.v2.xsd will be used in other Gateway Services outside of the /Returns/ namespace so it must be kept up-to-date, without numerous redundant versions remaining.

The ReturnCommon.v2.xsd imports the Common.v2.xsd and creates data types to be used across all tax types and return types. ReturnCommon.v2.xsd also includes two request elements and two response elements. These requests are retrieveFormInfoRequest and retrieveFilingObligationsRequest, while the responses are retrieveFilingObligationsResponse and retrieveStatusResponse.

The reason for adding root-level elements in the ReturnCommon.v2.xsd is due to the fact that these request and response structures will never change, regardless of the tax type. This allows Inland Revenue to keep a uniform request and response structure across all current and future tax types.

Importing from ReturnCommon.v2.xsd will be schemas that require more fine grained detail. These will primarily define the request for the File operation, the response for RetrieveReturn and the response for Prepop.

The IncomeReturnCommon.v1.xsd imports the ReturnCommon.v2.xsd and Common.v2.xsd and creates data types used across many of the specific income tax schemas. IncomeReturnCommon.v1.xsd also includes the prepopResponse element. This is because the prepopResponse is common between all income tax form types.

### 5.3 WSDLs

The Returns Gateway Service has one WSDL, which has a target namespace of <https://services.ird.govt.nz/GWS>Returns> and can be found at <https://services.ird.govt.nz:4046/gateway/GWS>Returns/?singleWsd>

**NOTE:** The production URL above will not work until you have onboarded with Inland Revenue.

All WSDL messages follow this naming convention:

```
Return_<operation>_InputMessage or Return_<operation>_OutputMessage.
```

```
<wsdl:portType name="Return">
  <wsdl:operation name="File">
  <wsdl:operation name="Prepop">
  <wsdl:operation name="RetrieveStatus">
  <wsdl:operation name="RetrieveFilingObligations">
  <wsdl:operation name="RetrieveReturn">
</wsdl:portType>
<wsdl:service name="Return">
```

**NOTE:** The WSDL hosted at the end point above will not contain these XSD references, only the static WSDL provided at <https://www.ird.govt.nz/software-providers/>.

## 6 Responses

The response message from the Gateway Services will always include a status code and status message. These values will describe the successes or failures of a web service call. Following the status message will be the responseBody, which will return the data for the given operation.

### 6.1 Generic gateway response codes

The following response codes are common to all Gateway Service calls. The operations on the Return Service all have framework security validation applied at the account level, as reflected in the descriptions of the codes below:

Standard codes	Standard message	Description
<b>-1</b>	An unknown error has occurred	This error will be logged by the Gateway Services and evaluated the next business day
<b>0</b>		0 indicates a successful web service call. NOTE: 0 does not display a standard message.
<b>1</b>	Authentication failure	Authentication failure means the token provided is not a valid token
<b>2</b>	Missing authentication token(s)	No OAuth token in HTTP header
<b>3</b>	Unauthorised access	The logon making the call does not have access to make the request on behalf of the client or agency
<b>4</b>	Unauthorised delegation	Access is not permitted for the requester to perform this operation for the submitted identifier. This code will be returned in any of these situations: <ul style="list-style-type: none"> <li>The submitted cmn:identifier has an invalid value.</li> <li>The identifier type (IdentifierValueType attribute on cmn:identifier) supplied is invalid.</li> <li>The AccountType supplied does not exist for that identifier.</li> <li>All the values above are valid, but the provided OAuth token does not have delegated access to that Customer or Account.</li> </ul>
<b>5</b>	Unauthorised vendor	The vendor provided is not authorised to use these suite of services

Standard codes	Standard message	Description
<b>7</b>	Account type not supported	This code will be returned for queries on account types not supported in any Gateway Services web services. From April 2019 this will be any account type other than AIL, AIP, BPA, MPO, CRS, DWT, FAT, FBT, GMD, GSD, GST, INC, IIT, ITN, IPS, NRT, PIE, PRS, PSO, EMP, RLT, RWT. For specific services some of the account types above may not be supported—please see the related documentation and the service-specific response codes below.
<b>20</b>	Unrecognised XML request	The XML submitted is not recognisable and no schema can be determined
<b>21</b>	XML request failed validation	The XML structure did not meet the definition laid out by the schemas published by Inland Revenue
<b>(none)</b>	(non xml)	In some scenarios where the request message does not have a well formed XML structure or is not valid or does not adhere to the SOAP protocol formats, the framework generates a parsing exception that is not wrapped in XML nor has a response status code.
<b>(none)</b>	(SOAP fault) UnAuthorised	When maximum concurrency has been exceeded by the service provider this SOAP fault will be returned

## 6.2 Generic returns response codes

The following response codes are specific to Returns Gateway Service calls:

Standard codes	Standard message	Description
<b>100</b>	Invalid request data	Could not extract data from XML payload
<b>101</b>	Unable to file return	An error has occurred while filing return. This may be due to invalid information in the specific return form fields.
<b>102</b>	ID/account type not valid	The account type/ ID submitted does not exist
<b>103</b>	No return found	No return exists on the selected filing period
<b>104</b>	Invalid filing period	The periodEndDate did not match a valid filing period for the account
<b>105</b>	No filing obligations found	No valid filing obligations were found. This could be completely acceptable if they were not expecting to have any filing obligations.
<b>106</b>	Operation not available for major form type	The operation performed does not exist for the account type/major form type combination submitted
<b>107</b>	Duplicate return	There is already a return for this period. An amendment to a form that has already been submitted must be submitted with isAmended as true.
<b>109</b>	Invalid amend reason	While amending there must be a valid amend reason (KEY, MATH, OTHER, TRANSPO). This may also be caused by no amendDetails if isAmended is true.
<b>133</b>	Nil returns are not supported for tax type	Nil returns are not supported for the tax type being filed
<b>135</b>	Invalid IRD number	An invalid IRD number was used on a field. Additional information will indicate which field does not meet the criteria.
<b>140</b>	Invalid minor form type	The value provided as a minor form type was invalid
<b>141</b>	Invalid attachment type	One or more of the attachment types submitted in the formType field were not valid. Attachment type should be the minorFormType of the attachment that is being submitted.

Standard codes	Standard message	Description
		Additional information will indicate the form type that is in error.
<b>142</b>	Filing obligation not met	The forms submitted did not meet the filing obligation for the period. This could happen if There is no primary form submitted or if the incorrect primary form was submitted.
<b>144</b>	Return being submitted	The return has been submitted and queued for processing. The return will be processed in near real time.
<b>145</b>	Return held for processing	The return cannot be retrieved or amended because it is being processed in the system
<b>146</b>	Return unavailable for viewing	The return cannot be viewed. This could be the case for older returns. Returns in this state can be amended.
<b>150</b>	Credit transfer requests are not supported	Credit transfer requests are not supported for the form type
<b>151</b>	Amendments are not supported for this tax type	Some tax types such as DTC cannot have amended submissions and the customer will need to contact IR in these instances
<b>152</b>	Only tax agents are able to file this return through the Gateway Services	Donation tax credit can only be filed by tax agents as there is no way for individuals to supply their own receipts through the webservice. Used for Donation Tax Credit operations.
<b>154</b>	Invalid transferAccountType	The account type specified in the credit transfer request must be valid
<b>155</b>	Credit transfers not allowed on a debit return	The return must result in a credit in order to have a credit transfer
<b>156</b>	transferAmount must be greater than 0	The credit transfer amount must be a positive number
<b>986</b>	No return found for supplied submission key on this period	The supplied submission key does not correlate to a return for this filing period
<b>997</b>	Submissionkey must be provided on amendment	SubmissionKey must be provided for amendments on form types that are allowed multiple

<b>FIPS</b>	Federal Information Processing Standard—a suite of IT standards from the US Federal Government
<b>Gateway</b>	Inland Revenue’s web services gateway
<b>GWS</b>	Gateway Services—the brand name for the suite of web services that Inland Revenue is providing. The Return Service is a Gateway Service.
<b>HTTP, HTTPS</b>	Hyper Text Transmission Protocol (Secure)—the protocol by which web browsers and servers interact with each other. When implemented over TLS1.2 HTTP becomes HTTPS.
<b>IAMS</b>	Identity and Access Management—a logical component that performs authentication and authorisation. Physically it is a set of discrete hardware and software products, plug-ins and protocols. Usually implemented as separate External IAMS (XIAMS) and Internal IAMS.
<b>ICA</b>	Imputation credit account
<b>IETC</b>	Independent tax earner credit
<b>IAS</b>	Identity and Access
<b>INC</b>	Inland Revenue’s abbreviation for Income Tax
<b>IP</b>	Internet Protocol—the principal communication protocol in the Internet protocol suite for relaying datagrams across networks
<b>IRD</b>	Inland Revenue Department (ie IRD number)

Acronym/term	Definition
<b>LTC</b>	Look-through company
<b>OAuth</b>	An HTTPS based protocol for authorising access to a resource, currently at version 2
<b>PIE</b>	Portfolio investment entity
<b>Payloads</b>	This refers to the data contained within the messages that are exchanged when a web service is invoked. Messages consist of a header and a payload.
<b>Schemas</b>	An XML schema defines the syntax of an XML document, in particular of a payload. The schema specifies what a valid payload (such as an income tax return) must/can contain, as well as validating the payload.
<b>SHA</b>	Secure Hashing Algorithm. There is a family of them that provide different strengths. SHA-2 is currently favoured over SHA-1, which has been compromised.
<b>SL</b>	Straight line method
<b>SOAP</b>	Simple Object Access Protocol—a set of standards for specifying web services. GWS uses SOAP version 1.2
<b>SSL</b>	Secure Sockets Layer certificates—used to establish an encrypted connection between a browser or user’s computer and a service or website
<b>START</b>	Simplified Taxation and Revenue Technology—Inland Revenue’s new core tax processing application. It is an implementation of the GenTax product from FAST Enterprises.

<b>URL</b>	Universal Resource Locator—also known as a web address
<b>WSDL</b>	Web Service Definition Language—an XML definition of a web service interface
<b>X.509 certificate</b>	An international standard for encoding and describing a digital certificate. In isolation a public key is just a very large number, the X.509 certificate to which it is bound identifies whose key it is, who issued it, when it expires etc. When a counterparty’s X.509 digital certificate is received, the recipient takes their public key out of it and store the key in their own keystore. The recipient can then use this key to encrypt and sign the messages that they exchange with this counterparty.
<b>XIAMS</b>	External IAMS—an instance of IAMS that authenticates and authorises access by external parties, for example customers, trading partners etc, as opposed to internal parties such as staff

---

Acronym/term	Definition
<b>XML</b>	Extensible Mark-up Language—a language used to define a set of rules used for encoding documents in a format that can be read by humans and machines
<b>XSD</b>	XML Schema Definition—the current standard schema language for all XML data and documents
